PROFESSIONAL SUMMARY

Full Stack Engineer & Backend Developer with 4.5+ years of experience designing and building scalable, high-performance, cloud-native applications in banking and e-commerce domains. Expertise in Python (Django, FastAPI), React.js, and Microservices Architecture with strong knowledge and RESTful API Development.

Proven track record of improving system performance, designing fault-tolerant and highly available systems, and handling high-volume real-time financial transactions (SWIFT, SEPA). Experienced in AWS Cloud Architecture, Docker, CI/CD Automation, and Agile methodologies.

TECHNICAL SKILLS

Backend Development

Python, Django, Django REST Framework, FastAPI, Flask, RESTful APIs, API Development

Frontend Development

React.js, JavaScript, HTML5, CSS3, Bootstrap

Databases

PostgreSQL, MySQL, Oracle, MongoDB, Sql server

Cloud & DevOps

AWS (EC2), Docker, Jenkins, CI/CD Pipelines, Containerization

Architecture

- Monolithic
- Microservices

Messaging & Caching

RabbitMQ, Redis

Testing & Tools

Pytest, Unit Testing, Integration Testing, Git, Jira, Postman, PyCharm, VS Code

PROFESSIONAL EXPERIENCE

Full Stack Developer

Tieto India Pvt. Ltd., Pune
Dec 2022 – Present

Core Banking Platform (Real-Time Payments System)

Tech Stack: Python, Django, React, REST APIs, Docker, Jenkins

- Designed and developed high-performance RESTful APIs for real-time financial transactions with low latency and high availability
- Processed thousands of transactions daily supporting SWIFT and SEPA payment systems
- Optimized complex SQL queries and indexing, reducing API response time by 30%+
- Built scalable backend services using Django, improving modularity and maintainability
- Implemented secure API authentication using JWT and industry-standard security practices
- Contributed to distributed systems ensuring fault tolerance and scalability
- Developed responsive UI components using React.js for enhanced user experience
- Ensured compliance with banking security and data validation standards

Core Banking Modernization (Migration)

Tech Stack: Python, React, Docker, Jenkins, HTML5, CSS, Jinja template

- Led the migration of a core legacy product to a modern, scalable architecture.
- Refactored and modernized legacy modules to improve maintainability, scalability, and performance. Improved system scalability, flexibility, and maintainability
- Containerized applications using Docker for consistent deployment environments
- Implemented CI/CD pipelines, reducing deployment time by 40%
- Enhanced system reliability, availability, and performance

Open Banking API platform

Tech Stack: Python, Bottle, REST APIs, Oracle, Redis, RabbitMQ, Docker, Jenkins, React, HTML5, CSS, JavaScript, OAuth 2.0, JWT

- Designed and developed secure Open Banking APIs enabling authorized third-party providers (TPPs) to access customer account and payment information with customer consent.
- Implemented OAuth 2.0 Authorization Code Flow and JWT-based authentication mechanisms to ensure secure access and regulatory compliance.
- Developed Account Information Services (AIS) and Payment Initiation Services (PIS) APIs in accordance with Open Banking standards and best practices.
- Built consent management workflows allowing customers to grant, review, and revoke third-party access to banking data.
- Integrated Redis and RabbitMQ to improve application performance, data processing efficiency, and asynchronous communication.
- Containerized application components using Docker and streamlined deployment processes through Jenkins-based CI/CD pipelines..

E-Commerce Web Application

Spanidea Systems Dec 2021-2022

Tech Stack: Python, Django, Oracle, REST APIs

- Developed backend modules for product catalog, order management, and reporting systems
- Built scalable REST APIs for seamless frontend-backend integration
- Improved application performance through debugging and optimization
- Generated business insights using Python (Pandas)
- Managed version control using Git and SVN

Healthcare Data processing & Integration

- Developed and maintained Python-based data processing pipelines to ingest healthcare data from multiple external sources.
 - Implemented data cleansing, validation, transformation, and mapping logic to align incoming data with database schemas.
 - Automated daily data processing workflows using cron jobs, ensuring timely and reliable data updates.
 - Managed secure file transfers through SFTP for automated exchange of data between external systems and internal databases.
 - Loaded processed data into relational databases, enabling accurate and consistent data availability for downstream applications.
 - Monitored and resolved data quality issues, improving the reliability and accuracy of healthcare data processing.
 - Collaborated with business and technical teams to troubleshoot data discrepancies and optimize data ingestion workflows.
-

KEY ACHIEVEMENTS

- Awarded “Pat on the Back” for outstanding performance
 - Reduced API latency through query optimization and performance tuning
 - Improved deployment efficiency by using CI/CD automation
 - Delivered scalable systems handling high-volume real-time transactions
 - Recognized for strong collaboration in Agile cross-functional teams
-

EDUCATION

Bachelor of Engineering
Solapur University, Maharashtra

ADDITIONAL INFORMATION

- **Domains:** Banking, Payments, E-commerce
- **Protocols:** SWIFT, SEPA, Instant Payments
- **Strengths:** Problem Solving, Scalable Architecture, Performance Optimization
- **Interests:** Backend Systems, Distributed Architecture, Cloud Technologies
